

::PRESS RELEASE::

MIREC WEEK 2019 will offer an overview of Mexico's renewable energy sector under a changing environment with new opportunities

Mexico City, February 25, 2019.- MIREC WEEK 2019, Mexico's leading clean energy congress and exhibition, will take place alongside a **period of changes and new business opportunities within the country's renewable energy sector** as a result of a new administration coming to power at the end of 2018. After the cancellation of the 4th Long-Term Auction and large transmission projects, the government is expected to announce alternative plans to keep Mexico's renewable energy goals on track, as well as the continued development of transmission infrastructure.

Meanwhile, the industry is currently waiting on the details of the government's strategy for the development of renewable energy in the country. The AMLO administration has recently reasserted its commitment to the development of renewables, and some of their mentioned plans include the enhancing of Distributed Generation, the installation of EV solar charging stations, the modernization of CFE's hydroelectric power plants and the development of research, technology and human resources in the sector.

All these changes represent challenges and will bring new opportunities for the renewable energy market. During a recent breakfast briefing hosted by the **MIREC WEEK** team in Mexico City, the latest updates in the Mexican renewable energy industry were addressed and discussed. The discussion mainly covered the alternatives that the new administration has to meet the growing demand in the country, the continuity of the development of the Wholesale Electricity Market and the crucial role that the private sector must perform in order to achieve its ambitious clean energy goals.

Against this backdrop, **MIREC WEEK 2019** will celebrate its **9th anniversary** in Mexico City at the **World Trade Center** from **20-22 May**. The award winning event is firmly established as the **leading platform for dialogue, knowledge and discussion about the challenges and opportunities in Mexico's renewable energy market**. This year the congress will address a broad range of topics including financing and investment, corporate energy use, distributed generation, energy storage, asset management and O&M and clean energy business strategies under the new AMLO administration.

The event will feature more than 300 high-level speakers from Mexico and across the globe providing 50 hours of expert analysis and content, providing business intelligence for decision-making in a shifting market.

An expected audience of 3,000 participants will attend the exhibition and congress, comprised of energy professionals, national and international investors, technology suppliers and project developers.

MIREC WEEK 2019 is sponsored by global leaders in renewable energy, including Huawei, CPS America, GCL, Longi Solar, Sungrow, Talesun, Alion Energy, Arctech Solar, BayWa r.e. Renewable Energy, Gamesa, Iusasol, Jema, Phono Solar, Soltec, Trunsun Solar, Nextracker, Cesime Solar, Pöyry and Solarig, among others.
